FOR JIRA CLOUD

Deleted a work item by mistake?

What happens next, and what Restorable can and cannot bring back.

THE PROBLEM

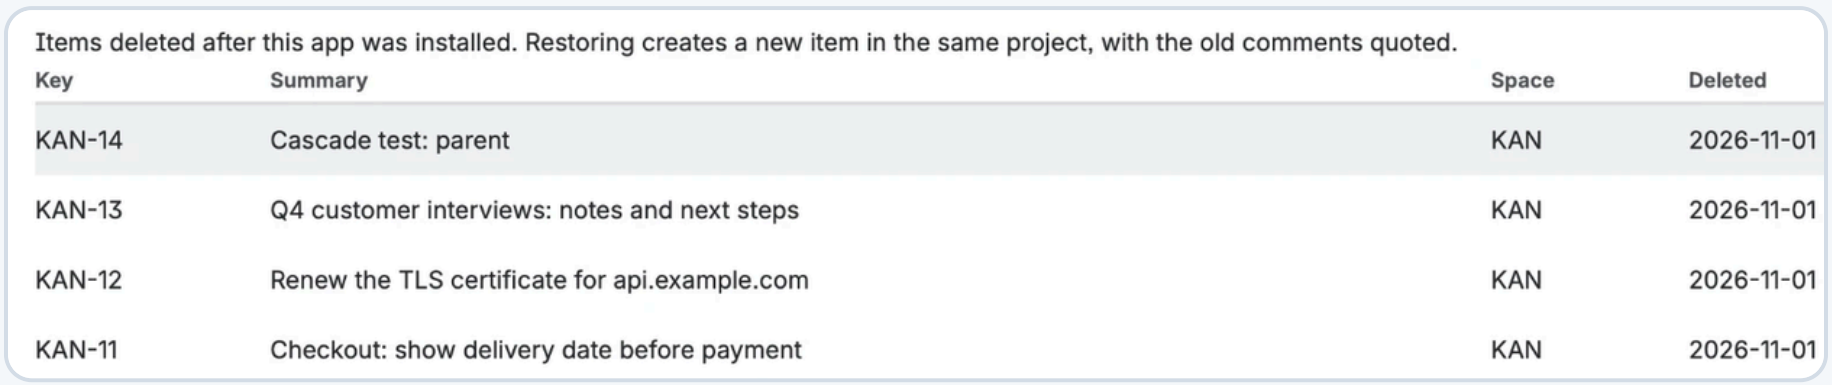

Jira Cloud has no recycle bin for a single work item.

Once deleted, the item and its comments are gone.

Atlassian's own request to restore deleted work items, JRACLOUD-36415, has been open since 2014.

WHAT RESTORABLE DOES

Keeps a copy. Restores in one click.

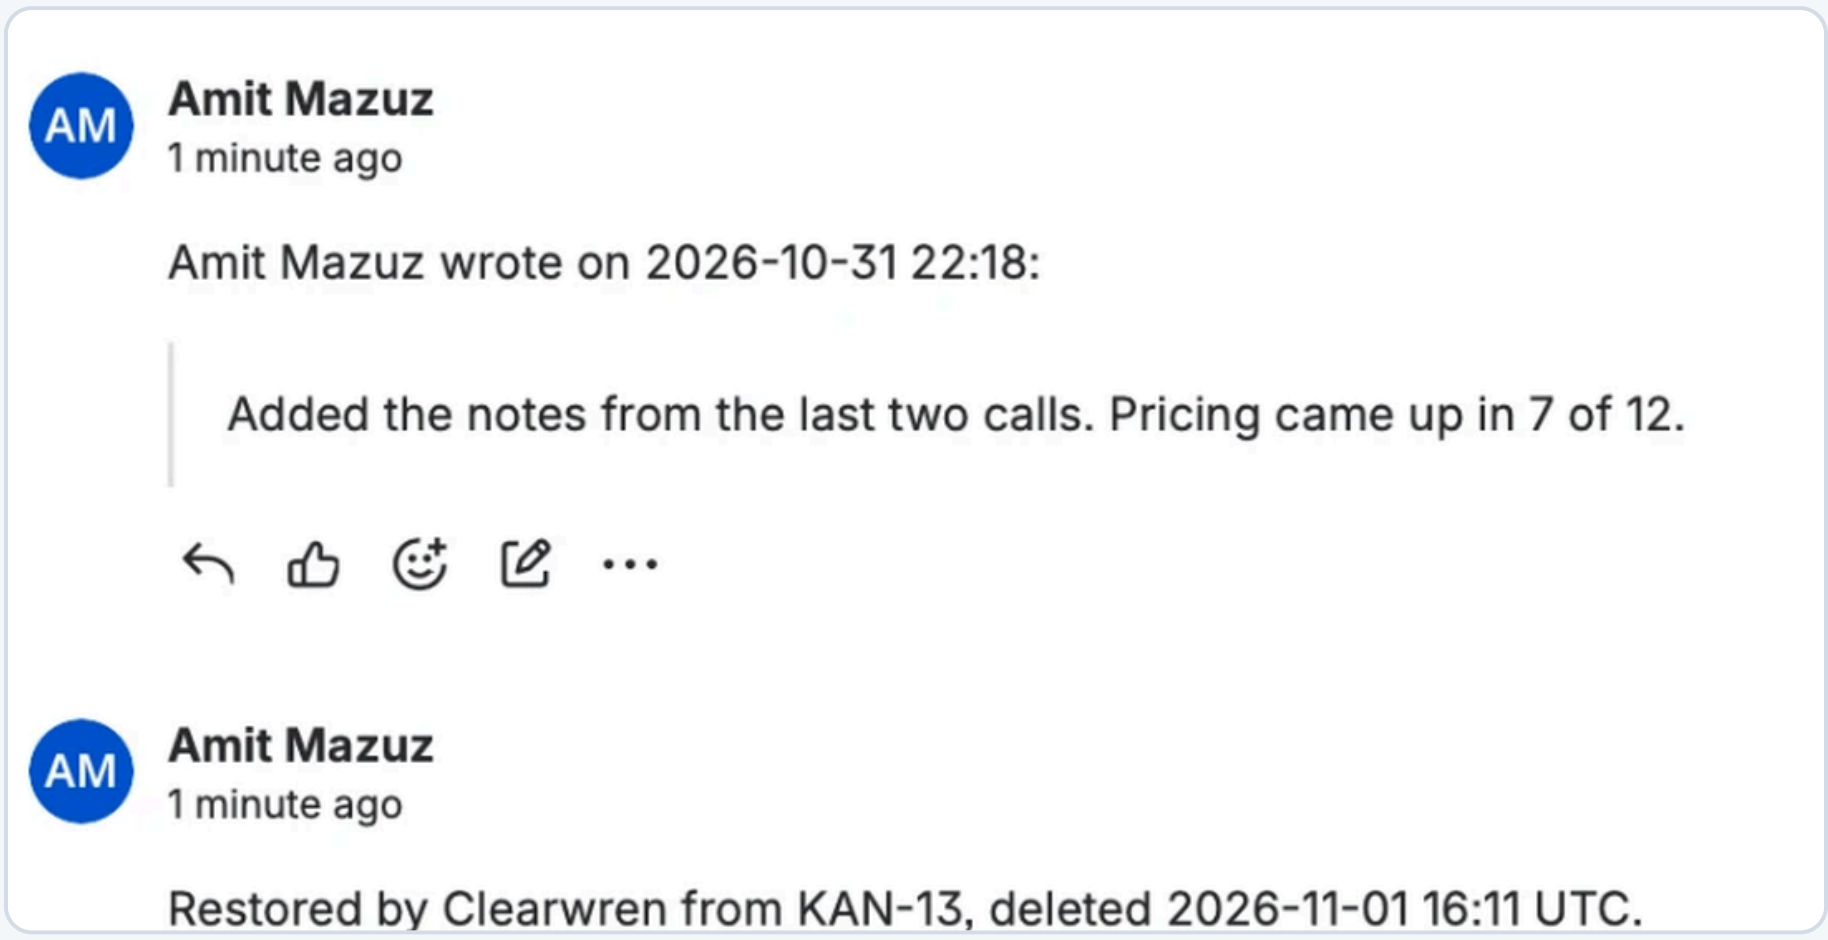

Items deleted after this app was installed. Restoring creates a new item in the same project, with the old comments quoted.

Key	Summary	Space	Deleted
KAN-14	Cascade test: parent	KAN	2026-11-01
KAN-13	Q4 customer interviews: notes and next steps	KAN	2026-11-01
KAN-12	Renew the TLS certificate for api.example.com	KAN	2026-11-01
KAN-11	Checkout: show delivery date before payment	KAN	2026-11-01

The copy lives inside your own Jira site. Restore recreates the item with summary, description, type, priority, labels, reporter, status and links. Sub-tasks come back under their restored parent.

COMMENTS

Old comments come back quoted.

With author and time. A comment on the new item records the old key.

THE HONEST LIMITS

Know what you get.

- **Attached files are listed, not restored.**
- The new item gets a new key.
- Work logs and history are not restored.
- Only items created or changed after install are protected.
- Copies are kept 90 days.

Runs on Atlassian. No outside servers, no analytics.
