

Accessibility snapshot

UC Santa Barbara, Engineering Computing Infrastructure · public Confluence pages at ucsb-engr.atlassian.net · 15 September 2026

We checked a random sample of 80 pages from ucsb-engr.atlassian.net, drawn from 283 that anyone can open without logging in. Each page went through automated checks mapped to WCAG success criteria at levels A and AA. Only failures the checks can confirm with certainty are counted.

29 of 80 pages (36%) have at least one such failure.

What comes up most

Failure	Pages	Instances
Image has no alternative text	18	82
Heading level is skipped	5	7
Link text does not say where it goes	4	4
Table has no header row	3	4

Five pages to start with

1. [Configuring Connect Calendar in Thunderbird](#)
Image has no alternative text (13)
2. [Zscaler Client Connector \(ZCC/ZPA\) FAQ](#)
Alternative text does not describe the image (10), e.g. "jamf_self_service_top_bar.png" · Table has no header row (2) · Link text does not say where it goes
3. [How do I get Solidworks?](#)
Text contrast is below the WCAG AA minimum (3)
4. [Remote Access to Computer Science Computing Labs](#)
Heading level is skipped (2)
5. [Wireless Network Support](#)
Link text does not say where it goes

Fixing the most common one

Image has no alternative text. Select the image, open the image toolbar and add alt text that conveys the same information as the picture. If it is purely decorative, mark it as decorative so it is skipped.

Why it matters

As a public university, UC Santa Barbara is covered by the US Department of Justice's ADA Title II rule, which sets WCAG 2.1 level AA as the standard for web content. Since the April 2026 extension, the compliance date for state and local government entities serving a population of 50,000 or more — which generally includes state universities — is 26 April 2027. Every failure in this report maps to a success criterion that already exists in WCAG 2.0 and 2.1.

Want the rest? Reply and we will send the complete page-by-page list for this sample, at no cost.

What this is not: automated checks find part of what WCAG asks for and cannot establish conformance on their own, and a sample is not an audit. Pages were read through Confluence's public API, following the site's robots.txt crawl delay. Source for the rule above:
